

Use-Case Flow Specification

Use Case: Check Out Equipment

Primary Actor: Community Member

Main Success Scenario

1. The Community Member selects the equipment they want to borrow.
2. The system checks the availability of the equipment.
3. The system verifies that the member is eligible to borrow the equipment.
4. The system calculates the required security deposit based on the equipment category.
5. The system determines the allowed loan duration and return date.
6. The Community Member confirms the checkout.
7. The system records the checkout details and return date.
8. The system marks the equipment as checked out.
9. The system confirms the successful checkout to the Community Member.

Alternate Flow – Equipment Unavailable

1. The Community Member selects an equipment item.
2. The system checks its availability and finds that the equipment is already checked out.
3. The system informs the Community Member that the equipment is unavailable.
4. The checkout process is stopped.
5. The Community Member can select another available equipment item.
